DETAILED ACTION

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1 and 2 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In step (A), it is not clear to which “a starting material” is referred and what is contained in this starting material.

The term “the resulting liquid reaction mixture lacks an antecedent basis.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.

Art Unit: 1764

4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 1 and 2 are rejected under 35 U.S.C. 103(a) as being unpatentable over

Honna discloses a process of isomerization of endo-trimethylenenorbornane in the presence of a solid catalyst to produce a product containing adamantane in the form of colorless, transparent solution. The solution is concentrated so that an adamantane of more than 99% pure is precipitated and the crystalline adamantane of more than 99% of purity is separated (the abstract, examples 1, and 12).

Honna appears to be silent as to the ratio of endo-trimethylenenorbornane/adamantane as called for in claim 1. However, the Honna concentration step must yield such ratio since as demonstrated in examples and comparative examples in the specification of this application. Adamantane product having a purity of more than 99% cannot be obtained if there is no such a concentrated feed for the crystallization step.

Honna does not disclose washing and drying the adamantane crystals. However, it would have been obvious to one having ordinary skill in the art at the time the invention was made to have modified the Honna process by washing and drying the precipitated adamantane to remove

possible impurities and dirt and washing solution on the crystals to obtain clean adamantane crystals.
